The Incitement to Discourse

The seventeenth century, then, was the beginning of an age of repression emblematic of what we call the bourgeois societies, an age which perhaps we still have not completely left behind. Calling sex by its name thereafter became more difficult and more costly. As if in order to gain mastery over it in reality, it had first been necessary to subjugate it at the level of language, control its free circulation in speech, expunge it from the things that were said, and extinguish the words that rendered it too visibly present. And even these prohibitions, it seems, were afraid to name it. Without even having to pronounce the word, modern prudishness was able to ensure that one did not speak of sex, merely through the interplay of prohibitions that referred back to one another: instances of muteness which, by dint of saying nothing, imposed silence. Censorship.

Yet when one looks back over these last three centuries with their continual transformations, things appear in a very different light: around and apropos of sex, one sees a veritable discursive explosion. We must be clear on this point, however. It is quite possible that there was an expurgation—and a very rigorous one—of the authorized vocabulary. It may indeed be true that a whole rhetoric of allusion and metaphor was codified. Without question, new rules of propriety

screened out some words: there was a policing of statements. A control over enunciations as well: where and when it was not possible to talk about such things became much more strictly defined; in which circumstances, among which speakers, and within which social relationships. Areas were thus established, if not of utter silence, at least of tact and discretion: between parents and children, for instance, or teachers and pupils, or masters and domestic servants. This almost certainly constituted a whole restrictive economy, one that was incorporated into that politics of language and speech—spontaneous on the one hand, concerted on the other—which accompanied the social redistributions of the classical period.

At the level of discourses and their domains, however, practically the opposite phenomenon occurred. There was a steady proliferation of discourses concerned with sex—specific discourses, different from one another both by their form and by their object: a discursive ferment that gathered momentum from the eighteenth century onward. Here I am thinking not so much of the probable increase in “illicit” discourses, that is, discourses of infraction that crudely named sex by way of insult or mockery of the new code of decency; the tightening up of the rules of decorum likely did produce, as a countereffect, a valorization and intensification of indecent speech. But more important was the multiplication of discourses concerning sex in the field of exercise of power itself: an institutional incitement to speak about it, and to do so more and more; a determination on the part of the agencies of power to hear it spoken about, and to cause *it* to speak through explicit articulation and endlessly accumulated detail.

Consider the evolution of the Catholic pastoral and the sacrament of penance after the Council of Trent. Little by little, the nakedness of the questions formulated by the confession manuals of the Middle Ages, and a good number of those still in use in the seventeenth century, was veiled. One

avoided entering into that degree of detail which some authors, such as Sanchez or Tamburini, had for a long time believed indispensable for the confession to be complete: description of the respective positions of the partners, the postures assumed, gestures, places touched, caresses, the precise moment of pleasure—an entire painstaking review of the sexual act in its very unfolding. Discretion was advised, with increasing emphasis. The greatest reserve was counseled when dealing with sins against purity: “This matter is similar to pitch, for, however one might handle it, even to cast it far from oneself, it sticks nonetheless, and always soils.”¹ And later, Alfonso de’ Liguori prescribed starting—and possibly going no further, especially when dealing with children—with questions that were “roundabout and vague.”²

But while the language may have been refined, the scope of the confession—the confession of the flesh—continually increased. This was partly because the Counter Reformation busied itself with stepping up the rhythm of the yearly confession in the Catholic countries, and because it tried to impose meticulous rules of self-examination; but above all, because it attributed more and more importance in penance—and perhaps at the expense of some other sins—to all the insinuations of the flesh: thoughts, desires, voluptuous imaginings, delectations, combined movements of the body and the soul; henceforth all this had to enter, in detail, into the process of confession and guidance. According to the new pastoral, sex must not be named imprudently, but its aspects, its correlations, and its effects must be pursued down to their slenderest ramifications: a shadow in a daydream, an image too slowly dispelled, a badly exorcised complicity between the body’s mechanics and the mind’s complacency: everything had to be told. A twofold evolution tended to make the flesh into the root of all evil, shifting the most important moment of transgression from the act itself to the stirrings

—so difficult to perceive and formulate—of desire. For this was an evil that afflicted the whole man, and in the most secret of forms: "Examine diligently, therefore, all the faculties of your soul: memory, understanding, and will. Examine with precision all your senses as well. . . . Examine, moreover, all your thoughts, every word you speak, and all your actions. Examine even unto your dreams, to know if, once awakened, you did not give them your consent. And finally, do not think that in so sensitive and perilous a matter as this, there is anything trivial or insignificant."³ Discourse, therefore, had to trace the meeting line of the body and the soul, following all its meanderings: beneath the surface of the sins, it would lay bare the unbroken nervure of the flesh. Under the authority of a language that had been carefully expurgated so that it was no longer directly named, sex was taken charge of, tracked down as it were, by a discourse that aimed to allow it no obscurity, no respite.

It was here, perhaps, that the injunction, so peculiar to the West, was laid down for the first time, in the form of a general constraint. I am not talking about the obligation to admit to violations of the laws of sex, as required by traditional penance; but of the nearly infinite task of telling—telling oneself and another, as often as possible, everything that might concern the interplay of innumerable pleasures, sensations, and thoughts which, through the body and the soul, had some affinity with sex. This scheme for transforming sex into discourse had been devised long before in an ascetic and monastic setting. The seventeenth century made it into a rule for everyone. It would seem in actual fact that it could scarcely have applied to any but a tiny elite; the great majority of the faithful who only went to confession on rare occasions in the course of the year escaped such complex prescriptions. But the important point no doubt is that this obligation was decreed, as an ideal at least, for every good

Christian. An imperative was established: Not only will you confess to acts contravening the law, but you will seek to transform your desire, your every desire, into discourse. Insofar as possible, nothing was meant to elude this dictum, even if the words it employed had to be carefully neutralized. The Christian pastoral prescribed as a fundamental duty the task of passing everything having to do with sex through the endless mill of speech.⁴ The forbidding of certain words, the decency of expressions, all the censorings of vocabulary, might well have been only secondary devices compared to that great subjugation: ways of rendering it morally acceptable and technically useful.

One could plot a line going straight from the seventeenth-century pastoral to what became its projection in literature, "scandalous" literature at that. "Tell everything," the directors would say time and again: "not only consummated acts, but sensual touchings, all impure gazes, all obscene remarks . . . all consenting thoughts."⁵ Sade takes up the injunction in words that seem to have been retranscribed from the treatises of spiritual direction: "Your narrations must be decorated with the most numerous and searching details; the precise way and extent to which we may judge how the passion you describe relates to human manners and man's character is determined by your willingness to disguise no circumstance; and what is more, the least circumstance is apt to have an immense influence upon the procuring of that kind of sensory irritation we expect from your stories."⁶ And again at the end of the nineteenth century, the anonymous author of *My Secret Life* submitted to the same prescription; outwardly, at least, this man was doubtless a kind of tradi-

⁴The reformed pastoral also laid down rules, albeit in a more discreet way, for putting sex into discourse. This notion will be developed in the next volume, *The Body and the Flesh*.

tional libertine; but he conceived the idea of complementing his life—which he had almost totally dedicated to sexual activity—with a scrupulous account of every one of its episodes. He sometimes excuses himself by stressing his concern to educate young people, this man who had eleven volumes published, in a printing of only a few copies, which were devoted to the least adventures, pleasures, and sensations of his sex. It is best to take him at his word when he lets into his text the voice of a pure imperative: "I recount the facts, just as they happened, insofar as I am able to recollect them; this is all that I can do"; "a secret life must not leave out anything; there is nothing to be ashamed of . . . one can never know too much concerning human nature."⁷ The solitary author of *My Secret Life* often says, in order to justify his describing them, that his strangest practices undoubtedly were shared by thousands of men on the surface of the earth. But the guiding principle for the strangest of these practices, which was the fact of recounting them all, and in detail, from day to day, had been lodged in the heart of modern man for over two centuries. Rather than seeing in this singular man a courageous fugitive from a "Victorianism" that would have compelled him to silence, I am inclined to think that, in an epoch dominated by (highly prolix) directives enjoining discretion and modesty, he was the most direct and in a way the most naïve representative of a plurisecular injunction to talk about sex. The historical accident would consist rather of the reticences of "Victorian puritanism"; at any rate, they were a digression, a refinement, a tactical diversion in the great process of transforming sex into discourse.

This nameless Englishman will serve better than his queen as the central figure for a sexuality whose main features were already taking shape with the Christian pastoral. Doubtless, in contrast to the latter, for him it was a matter of augmenting the sensations he experienced with the details of what he

said about them; like Sade, he wrote "for his pleasure alone," in the strongest sense of the expression; he carefully mixed the editing and rereading of his text with erotic scenes which those writer's activities repeated, prolonged, and stimulated. But after all, the Christian pastoral also sought to produce specific effects on desire, by the mere fact of transforming it—fully and deliberately—into discourse: effects of mastery and detachment, to be sure, but also an effect of spiritual reconversion, of turning back to God, a physical effect of blissful suffering from feeling in one's body the pangs of temptation and the love that resists it. This is the essential thing: that Western man has been drawn for three centuries to the task of telling everything concerning his sex; that since the classical age there has been a constant optimization and an increasing valorization of the discourse on sex; and that this carefully analytical discourse was meant to yield multiple effects of displacement, intensification, reorientation, and modification of desire itself. Not only were the boundaries of what one could say about sex enlarged, and men compelled to hear it said; but more important, discourse was connected to sex by a complex organization with varying effects, by a deployment that cannot be adequately explained merely by referring it to a law of prohibition. A censorship of sex? There was installed rather an apparatus for producing an ever greater quantity of discourse about sex, capable of functioning and taking effect in its very economy.

This technique might have remained tied to the destiny of Christian spirituality if it had not been supported and relayed by other mechanisms. In the first place, by a "public interest." Not a collective curiosity or sensibility; not a new mentality; but power mechanisms that functioned in such a way that discourse on sex—for reasons that will have to be examined—became essential. Toward the beginning of the eighteenth century, there emerged a political, economic, and technical incitement to talk about sex. And not so much in the form of a general theory of sexuality as in the form of

analysis, stocktaking, classification, and specification, of quantitative or causal studies. This need to take sex "into account," to pronounce a discourse on sex that would not derive from morality alone but from rationality as well, was sufficiently new that at first it wondered at itself and sought apologies for its own existence. How could a discourse based on reason speak of *that*? "Rarely have philosophers directed a steady gaze to these objects situated between disgust and ridicule, where one must avoid both hypocrisy and scandal."⁸ And nearly a century later, the medical establishment, which one might have expected to be less surprised by what it was about to formulate, still stumbled at the moment of speaking: "The darkness that envelops these facts, the shame and disgust they inspire, have always repelled the observer's gaze. . . . For a long time I hesitated to introduce the loathsome picture into this study."⁹ What is essential is not in all these scruples, in the "moralism" they betray, or in the hypocrisy one can suspect them of, but in the recognized necessity of overcoming this hesitation. One had to speak of sex; one had to speak publicly and in a manner that was not determined by the division between licit and illicit, even if the speaker maintained the distinction for himself (which is what these solemn and preliminary declarations were intended to show): one had to speak of it as of a thing to be not simply condemned or tolerated but managed, inserted into systems of utility, regulated for the greater good of all, made to function according to an optimum. Sex was not something one simply judged; it was a thing one administered. It was in the nature of a public potential; it called for management procedures; it had to be taken charge of by analytical discourses. In the eighteenth century, sex became a "police" matter—in the full and strict sense given the term at the time: not the repression of disorder, but an ordered maximization

of collective and individual forces: "We must consolidate and augment, through the wisdom of its regulations, the internal power of the state; and since this power consists not only in the Republic in general, and in each of the members who constitute it, but also in the faculties and talents of those belonging to it, it follows that the police must concern themselves with these means and make them serve the public welfare. And they can only obtain this result through the knowledge they have of those different assets."¹⁰ A policing of sex: that is, not the rigor of a taboo, but the necessity of regulating sex through useful and public discourses.

A few examples will suffice. One of the great innovations in the techniques of power in the eighteenth century was the emergence of "population" as an economic and political problem: population as wealth, population as manpower or labor capacity, population balanced between its own growth and the resources it commanded. Governments perceived that they were not dealing simply with subjects, or even with a "people," but with a "population," with its specific phenomena and its peculiar variables: birth and death rates, life expectancy, fertility, state of health, frequency of illnesses, patterns of diet and habitation. All these variables were situated at the point where the characteristic movements of life and the specific effects of institutions intersected: "States are not populated in accordance with the natural progression of propagation, but by virtue of their industry, their products, and their different institutions. . . . Men multiply like the yields from the ground and in proportion to the advantages and resources they find in their labors."¹¹ At the heart of this economic and political problem of population was sex: it was necessary to analyze the birth-rate, the age of marriage, the legitimate and illegitimate births, the precocity and frequency of sexual relations, the ways of making them fertile or sterile, the effects of unmar-

ried life or of the prohibitions, the impact of contraceptive practices—of those notorious “deadly secrets” which demographers on the eve of the Revolution knew were already familiar to the inhabitants of the countryside.

Of course, it had long been asserted that a country had to be populated if it hoped to be rich and powerful; but this was the first time that a society had affirmed, in a constant way, that its future and its fortune were tied not only to the number and the uprightness of its citizens, to their marriage rules and family organization, but to the manner in which each individual made use of his sex. Things went from ritual lamenting over the unfruitful debauchery of the rich, bachelors, and libertines to a discourse in which the sexual conduct of the population was taken both as an object of analysis and as a target of intervention; there was a progression from the crudely populationist arguments of the mercantilist epoch to the much more subtle and calculated attempts at regulation that tended to favor or discourage—according to the objectives and exigencies of the moment—an increasing birthrate. Through the political economy of population there was formed a whole grid of observations regarding sex. There emerged the analysis of the modes of sexual conduct, their determinations and their effects, at the boundary line of the biological and the economic domains. There also appeared those systematic campaigns which, going beyond the traditional means—moral and religious exhortations, fiscal measures—tried to transform the sexual conduct of couples into a concerted economic and political behavior. In time these new measures would become anchorage points for the different varieties of racism of the nineteenth and twentieth centuries. It was essential that the state know what was happening with its citizens' sex, and the use they made of it, but also that each individual be capable of controlling the use he made of it. Between the state and the individual, sex became an issue, and a public issue no less; a whole web of discourses, special knowledges, analyses, and injunctions settled upon it.

The situation was similar in the case of children's sex. It is often said that the classical period consigned it to an obscurity from which it scarcely emerged before the *Three Essays* or the beneficent anxieties of Little Hans. It is true that a longstanding "freedom" of language between children and adults, or pupils and teachers, may have disappeared. No seventeenth-century pedagogue would have publicly advised his disciple, as did Erasmus in his *Dialogues*, on the choice of a good prostitute. And the boisterous laughter that had accompanied the precocious sexuality of children for so long—and in all social classes, it seems—was gradually stifled. But this was not a plain and simple imposition of silence. Rather, it was a new regime of discourses. Not any less was said about it; on the contrary. But things were said in a different way; it was different people who said them, from different points of view, and in order to obtain different results. Silence itself—the things one declines to say, or is forbidden to name, the discretion that is required between different speakers—is less the absolute limit of discourse, the other side from which it is separated by a strict boundary, than an element that functions alongside the things said, with them and in relation to them within over-all strategies. There is no binary division to be made between what one says and what one does not say; we must try to determine the different ways of not saying such things, how those who can and those who cannot speak of them are distributed, which type of discourse is authorized, or which form of discretion is required in either case. There is not one but many silences, and they are an integral part of the strategies that underlie and permeate discourses.

Take the secondary schools of the eighteenth century, for example. On the whole, one can have the impression that sex was hardly spoken of at all in these institutions. But one only has to glance over the architectural layout, the rules of discipline, and their whole internal organization: the question of sex was a constant preoccupation. The builders considered it

explicitly. The organizers took it permanently into account. All who held a measure of authority were placed in a state of perpetual alert, which the fixtures, the precautions taken, the interplay of punishments and responsibilities, never ceased to reiterate. The space for classes, the shape of the tables, the planning of the recreation lessons, the distribution of the dormitories (with or without partitions, with or without curtains), the rules for monitoring bedtime and sleep periods—all this referred, in the most prolix manner, to the sexuality of children.¹² What one might call the internal discourse of the institution—the one it employed to address itself, and which circulated among those who made it function—was largely based on the assumption that this sexuality existed, that it was precocious, active, and ever present. But this was not all: the sex of the schoolboy became in the course of the eighteenth century—and quite apart from that of adolescents in general—a public problem. Doctors counseled the directors and professors of educational establishments, but they also gave their opinions to families; educators designed projects which they submitted to the authorities; schoolmasters turned to students, made recommendations to them, and drafted for their benefit books of exhortation, full of moral and medical examples. Around the schoolboy and his sex there proliferated a whole literature of precepts, opinions, observations, medical advice, clinical cases, outlines for reform, and plans for ideal institutions. With Basedow and the German “philanthropic” movement, this transformation of adolescent sex into discourse grew to considerable dimensions. Salzmann even organized an experimental school

which owed its exceptional character to a supervision and education of sex so well thought out that youth's universal sin would never need to be practiced there. And with all these measures taken, the child was not to be simply the mute and unconscious object of attentions prearranged between adults only; a certain reasonable, limited, canonical, and truthful discourse on sex was prescribed for him—a kind of discursive orthopedics. The great festival organized at the Philanthropinum in May of 1776 can serve as a vignette in this regard. Taking the form of an examination, mixed with floral games, the awarding of prizes, and a board of review, this was the first solemn communion of adolescent sex and reasonable discourse. In order to show the success of the sex education given the students, Basedow had invited all the dignitaries that Germany could muster (Goethe was one of the few to decline the invitation). Before the assembled public, one of the professors, a certain Wolke, asked the students selected questions concerning the mysteries of sex, birth, and procreation. He had them comment on engravings that depicted a pregnant woman, a couple, and a cradle. The replies were enlightened, offered without shame or embarrassment. No unseemly laughter intervened to disturb them—except from the very ranks of an adult audience more childish than the children themselves, and whom Wolke severely reprimanded. At the end, they all applauded these cherub-faced boys who, in front of adults, had skillfully woven the garlands of discourse and sex.¹³

It would be less than exact to say that the pedagogical institution has imposed a ponderous silence on the sex of children and adolescents. On the contrary, since the eighteenth century it has multiplied the forms of discourse on the subject; it has established various points of implantation for sex; it has coded contents and qualified speakers. Speaking

¹³ Johann Gottlieb Schummel, *Fritzens Reise nach Dessau* (1776), cited by Auguste Pinloche, *La Réforme de l'éducation en Allemagne au XVIII^e siècle* (1889), pp. 125–9.

about children's sex, inducing educators, physicians, administrators, and parents to speak of it, or speaking to them about it, causing children themselves to talk about it, and enclosing them in a web of discourses which sometimes address them, sometimes speak about them, or impose canonical bits of knowledge on them, or use them as a basis for constructing a science that is beyond their grasp—all this together enables us to link an intensification of the interventions of power to a multiplication of discourse. The sex of children and adolescents has become, since the eighteenth century, an important area of contention around which innumerable institutional devices and discursive strategies have been deployed. It may well be true that adults and children themselves were deprived of a certain way of speaking about sex, a mode that was disallowed as being too direct, crude, or coarse. But this was only the counterpart of other discourses, and perhaps the condition necessary in order for them to function, discourses that were interlocking, hierarchized, and all highly articulated around a cluster of power relations.

One could mention many other centers which in the eighteenth or nineteenth century began to produce discourses on sex. First there was medicine, via the "nervous disorders"; next psychiatry, when it set out to discover the etiology of mental illnesses, focusing its gaze first on "excess," then onanism, then frustration, then "frauds against procreation," but especially when it annexed the whole of the sexual perversions as its own province; criminal justice, too, which had long been concerned with sexuality, particularly in the form of "heinous" crimes and crimes against nature, but which, toward the middle of the nineteenth century, broadened its jurisdiction to include petty offenses, minor indecencies, insignificant perversions; and lastly, all those social controls, cropping up at the end of the last century, which screened the sexuality of couples, parents and children, dangerous and endangered adolescents—undertaking to protect,

separate, and forewarn, signaling perils everywhere, awakening people's attention, calling for diagnoses, piling up reports, organizing therapies. These sites radiated discourses aimed at sex, intensifying people's awareness of it as a constant danger, and this in turn created a further incentive to talk about it.

One day in 1867, a farm hand from the village of Lapcourt, who was somewhat simple-minded, employed here then there, depending on the season, living hand-to-mouth from a little charity or in exchange for the worst sort of labor, sleeping in barns and stables, was turned in to the authorities. At the border of a field, he had obtained a few caresses from a little girl, just as he had done before and seen done by the village urchins round about him; for, at the edge of the wood, or in the ditch by the road leading to Saint-Nicolas, they would play the familiar game called "curdled milk." So he was pointed out by the girl's parents to the mayor of the village, reported by the mayor to the gendarmes, led by the gendarmes to the judge, who indicted him and turned him over first to a doctor, then to two other experts who not only wrote their report but also had it published.¹⁴ What is the significant thing about this story? The pettiness of it all; the fact that this everyday occurrence in the life of village sexuality, these inconsequential bucolic pleasures, could become, from a certain time, the object not only of a collective intolerance but of a judicial action, a medical intervention, a careful clinical examination, and an entire theoretical elaboration. The thing to note is that they went so far as to measure the brainpan, study the facial bone structure, and inspect for possible signs of degenerescence the anatomy of this personage who up to that moment had been an integral part of village life; that they made him talk; that they questioned him concerning his thoughts, inclinations, habits, sensations, and opinions. And then, acquitting him of any crime, they

¹⁴ H. Bonnet and J. Bulard, *Rapport médico-légal sur l'état mental de Ch.-J. Jouy*, January 4, 1968.

decided finally to make him into a pure object of medicine and knowledge—an object to be shut away till the end of his life in the hospital at Maréville, but also one to be made known to the world of learning through a detailed analysis. One can be fairly certain that during this same period the Lapcourt schoolmaster was instructing the little villagers to mind their language and not talk about all these things aloud. But this was undoubtedly one of the conditions enabling the institutions of knowledge and power to overlay this everyday bit of theater with their solemn discourse. So it was that our society—and it was doubtless the first in history to take such measures—assembled around these timeless gestures, these barely furtive pleasures between simple-minded adults and alert children, a whole machinery for speechifying, analyzing, and investigating.

Between the licentious Englishman, who earnestly recorded for his own purposes the singular episodes of his secret life, and his contemporary, this village halfwit who would give a few pennies to the little girls for favors the older ones refused him, there was without doubt a profound connection: in any case, from one extreme to the other, sex became something to say, and to say exhaustively in accordance with deployments that were varied, but all, in their own way, compelling. Whether in the form of a subtle confession in confidence or an authoritarian interrogation, sex—be it refined or rustic—had to be put into words. A great polymorphous injunction bound the Englishman and the poor Lorraine peasant alike. As history would have it, the latter was named Jouy.*

Since the eighteenth century, sex has not ceased to provoke a kind of generalized discursive erethism. And these discourses on sex did not multiply apart from or against power, but in the very space and as the means of its exercise. Incitements to speak were orchestrated from all quarters,

*Jouy sounds like the past participle of *jouir*, the French verb meaning to enjoy, to delight in (something), but also to have an orgasm, to come. (Translator's note)

apparatuses everywhere for listening and recording, procedures for observing, questioning, and formulating. Sex was driven out of hiding and constrained to lead a discursive existence. From the singular imperialism that compels everyone to transform their sexuality into a perpetual discourse, to the manifold mechanisms which, in the areas of economy, pedagogy, medicine, and justice, incite, extract, distribute, and institutionalize the sexual discourse, an immense verbosity is what our civilization has required and organized. Surely no other type of society has ever accumulated—and in such a relatively short span of time—a similar quantity of discourses concerned with sex. It may well be that we talk about sex more than anything else; we set our minds to the task; we convince ourselves that we have never said enough on the subject, that, through inertia or submissiveness, we conceal from ourselves the blinding evidence, and that what is essential always eludes us, so that we must always start out once again in search of it. It is possible that where sex is concerned, the most long-winded, the most impatient of societies is our own.

But as this first overview shows, we are dealing less with a discourse on sex than with a multiplicity of discourses produced by a whole series of mechanisms operating in different institutions. The Middle Ages had organized around the theme of the flesh and the practice of penance a discourse that was markedly unitary. In the course of recent centuries, this relative uniformity was broken apart, scattered, and multiplied in an explosion of distinct discursivities which took form in demography, biology, medicine, psychiatry, psychology, ethics, pedagogy, and political criticism. More precisely, the secure bond that held together the moral theology of concupiscence and the obligation of confession (equivalent to the theoretical discourse on sex and its first-person formulation) was, if not broken, at least loosened and diversified: between the objectification of sex in rational discourses, and the movement by which each individual was set

to the task of recounting his own sex, there has occurred, since the eighteenth century, a whole series of tensions, conflicts, efforts at adjustment, and attempts at retranscription. So it is not simply in terms of a continual extension that we must speak of this discursive growth; it should be seen rather as a dispersion of centers from which discourses emanated, a diversification of their forms, and the complex deployment of the network connecting them. Rather than the uniform concern to hide sex, rather than a general prudishness of language, what distinguishes these last three centuries is the variety, the wide dispersion of devices that were invented for speaking about it, for having it be spoken about, for inducing it to speak of itself, for listening, recording, transcribing, and redistributing what is said about it: around sex, a whole network of varying, specific, and coercive transpositions into discourse. Rather than a massive censorship, beginning with the verbal proprieties imposed by the Age of Reason, what was involved was a regulated and polymorphous incitement to discourse.

The objection will doubtless be raised that if so many stimulations and constraining mechanisms were necessary in order to speak of sex, this was because there reigned over everyone a certain fundamental prohibition; only definite necessities—economic pressures, political requirements—were able to lift this prohibition and open a few approaches to the discourse on sex, but these were limited and carefully coded; so much talk about sex, so many insistent devices contrived for causing it to be talked about—but under strict conditions: does this not prove that it was an object of secrecy, and more important, that there is still an attempt to keep it that way? But this often-stated theme, that sex is outside of discourse and that only the removing of an obstacle, the breaking of a secret, can clear the way leading to it, is precisely what needs to be examined. Does it not partake of the injunction by which discourse is provoked? Is it not with the aim of inciting people to speak of sex that it is made

to mirror, at the outer limit of every actual discourse, something akin to a secret whose discovery is imperative, a thing abusively reduced to silence, and at the same time difficult and necessary, dangerous and precious to divulge? We must not forget that by making sex into that which, above all else, had to be confessed, the Christian pastoral always presented it as the disquieting enigma: not a thing which stubbornly shows itself, but one which always hides, the insidious presence that speaks in a voice so muted and often disguised that one risks remaining deaf to it. Doubtless the secret does not reside in that basic reality in relation to which all the incitements to speak of sex are situated—whether they try to force the secret, or whether in some obscure way they reinforce it by the manner in which they speak of it. It is a question rather of a theme that forms part of the very mechanics of these incitements: a way of giving shape to the requirement to speak about the matter, a fable that is indispensable to the endlessly proliferating economy of the discourse on sex. What is peculiar to modern societies, in fact, is not that they consigned sex to a shadow existence, but that they dedicated themselves to speaking of it *ad infinitum*, while exploiting it as *the* secret.

The Perverse Implantation

A possible objection: it would be a mistake to see in this proliferation of discourses merely a quantitative phenomenon, something like a pure increase, as if what was said in them were immaterial, as if the fact of speaking about sex were of itself more important than the forms of imperatives that were imposed on it by speaking about it. For was this transformation of sex into discourse not governed by the endeavor to expel from reality the forms of sexuality that were not amenable to the strict economy of reproduction: to say no to unproductive activities, to banish casual pleasures, to reduce or exclude practices whose object was not procreation? Through the various discourses, legal sanctions against minor perversions were multiplied; sexual irregularity was annexed to mental illness; from childhood to old age, a norm of sexual development was defined and all the possible deviations were carefully described; pedagogical controls and medical treatments were organized; around the least fantasies, moralists, but especially doctors, brandished the whole emphatic vocabulary of abomination. Were these anything more than means employed to absorb, for the benefit of a genitally centered sexuality, all the fruitless pleasures? All this garrulous attention which has us in a stew over sexuality, is it not motivated by one basic concern: to ensure popula-

tion, to reproduce labor capacity, to perpetuate the form of social relations: in short, to constitute a sexuality that is economically useful and politically conservative?

I still do not know whether this is the ultimate objective. But this much is certain: reduction has not been the means employed for trying to achieve it. The nineteenth century and our own have been rather the age of multiplication: a dispersion of sexualities, a strengthening of their disparate forms, a multiple implantation of "perversions." Our epoch has initiated sexual heterogeneities.

Up to the end of the eighteenth century, three major explicit codes—apart from the customary regularities and constraints of opinion—governed sexual practices: canonical law, the Christian pastoral, and civil law. They determined, each in its own way, the division between licit and illicit. They were all centered on matrimonial relations: the marital obligation, the ability to fulfill it, the manner in which one complied with it, the requirements and violences that accompanied it, the useless or unwarranted caresses for which it was a pretext, its fecundity or the way one went about making it sterile, the moments when one demanded it (dangerous periods of pregnancy or breast-feeding, forbidden times of Lent or abstinence), its frequency or infrequency, and so on. It was this domain that was especially saturated with prescriptions. The sex of husband and wife was beset by rules and recommendations. The marriage relation was the most intense focus of constraints; it was spoken of more than anything else; more than any other relation, it was required to give a detailed accounting of itself. It was under constant surveillance: if it was found to be lacking, it had to come forward and plead its case before a witness. The "rest" remained a good deal more confused: one only has to think of the uncertain status of "sodomy," or the indifference regarding the sexuality of children.

Moreover, these different codes did not make a clear distinction between violations of the rules of marriage and

deviations with respect to genitality. Breaking the rules of marriage or seeking strange pleasures brought an equal measure of condemnation. On the list of grave sins, and separated only by their relative importance, there appeared debauchery (extramarital relations), adultery, rape, spiritual or carnal incest, but also sodomy, or the mutual "caress." As to the courts, they could condemn homosexuality as well as infidelity, marriage without parental consent, or bestiality. What was taken into account in the civil and religious jurisdictions alike was a general unlawfulness. Doubtless acts "contrary to nature" were stamped as especially abominable, but they were perceived simply as an extreme form of acts "against the law"; they were infringements of decrees which were just as sacred as those of marriage, and which had been established for governing the order of things and the plan of beings. Prohibitions bearing on sex were essentially of a juridical nature. The "nature" on which they were based was still a kind of law. For a long time hermaphrodites were criminals, or crime's offspring, since their anatomical disposition, their very being, confounded the law that distinguished the sexes and prescribed their union.

The discursive explosion of the eighteenth and nineteenth centuries caused this system centered on legitimate alliance to undergo two modifications. First, a centrifugal movement with respect to heterosexual monogamy. Of course, the array of practices and pleasures continued to be referred to it as their internal standard; but it was spoken of less and less, or in any case with a growing moderation. Efforts to find out its secrets were abandoned; nothing further was demanded of it than to define itself from day to day. The legitimate couple, with its regular sexuality, had a right to more discretion. It tended to function as a norm, one that was stricter, perhaps, but quieter. On the other hand, what came under scrutiny was the sexuality of children, mad men and women, and criminals; the sensuality of those who did not like the opposite sex; reveries, obsessions, petty manias, or great tran-

sports of rage. It was time for all these figures, scarcely noticed in the past, to step forward and speak, to make the difficult confession of what they were. No doubt they were condemned all the same; but they were listened to; and if regular sexuality happened to be questioned once again, it was through a reflux movement, originating in these peripheral sexualities.

Whence the setting apart of the "unnatural" as a specific dimension in the field of sexuality. This kind of activity assumed an autonomy with regard to the other condemned forms such as adultery or rape (and the latter were condemned less and less): to marry a close relative or practice sodomy, to seduce a nun or engage in sadism, to deceive one's wife or violate cadavers, became things that were essentially different. The area covered by the Sixth Commandment began to fragment. Similarly, in the civil order, the confused category of "debauchery," which for more than a century had been one of the most frequent reasons for administrative confinement, came apart. From the debris, there appeared on the one hand infractions against the legislation (or morality) pertaining to marriage and the family, and on the other, offenses against the regularity of a natural function (offenses which, it must be added, the law was apt to punish). Here we have a likely reason, among others, for the prestige of Don Juan, which three centuries have not erased. Underneath the great violator of the rules of marriage—stealer of wives, seducer of virgins, the shame of families, and an insult to husbands and fathers—another personage can be glimpsed: the individual driven, in spite of himself, by the somber madness of sex. Underneath the libertine, the pervert. He deliberately breaks the law, but at the same time, something like a nature gone awry transports him far from all nature; his death is the moment when the supernatural return of the crime and its retribution thwarts the flight into counternature. There were two great systems conceived by the West for governing sex: the law of marriage and the order

of desires—and the life of Don Juan overturned them both. We shall leave it to psychoanalysts to speculate whether he was homosexual, narcissistic, or impotent.

Although not without delay and equivocation, the natural laws of matrimony and the immanent rules of sexuality began to be recorded on two separate registers. There emerged a world of perversion which partook of that of legal or moral infraction, yet was not simply a variety of the latter. An entire sub-race was born, different—despite certain kinship ties—from the libertines of the past. From the end of the eighteenth century to our own, they circulated through the pores of society; they were always hounded, but not always by laws; were often locked up, but not always in prisons; were sick perhaps, but scandalous, dangerous victims, prey to a strange evil that also bore the name of vice and sometimes crime. They were children wise beyond their years, precocious little girls, ambiguous schoolboys, dubious servants and educators, cruel or maniacal husbands, solitary collectors, ramblers with bizarre impulses; they haunted the houses of correction, the penal colonies, the tribunals, and the asylums; they carried their infamy to the doctors and their sickness to the judges. This was the numberless family of perverts who were on friendly terms with delinquents and akin to madmen. In the course of the century they successively bore the stamp of “moral folly,” “genital neurosis,” “aberration of the genetic instinct,” “degenerescence,” or “physical imbalance.”

What does the appearance of all these peripheral sexualities signify? Is the fact that they could appear in broad daylight a sign that the code had become more lax? Or does the fact that they were given so much attention testify to a stricter regime and to its concern to bring them under close supervision? In terms of repression, things are unclear. There was permissiveness, if one bears in mind that the severity of the codes relating to sexual offenses diminished considerably in the nineteenth century and that law itself often deferred

to medicine. But an additional ruse of severity, if one thinks of all the agencies of control and all the mechanisms of surveillance that were put into operation by pedagogy or therapeutics. It may be the case that the intervention of the Church in conjugal sexuality and its rejection of "frauds" against procreation had lost much of their insistence over the previous two hundred years. But medicine made a forceful entry into the pleasures of the couple: it created an entire organic, functional, or mental pathology arising out of "incomplete" sexual practices; it carefully classified all forms of related pleasures; it incorporated them into the notions of "development" and instinctual "disturbances"; and it undertook to manage them.

Perhaps the point to consider is not the level of indulgence or the quantity of repression but the form of power that was exercised. When this whole thicket of disparate sexualities was labeled, as if to disentangle them from one another, was the object to exclude them from reality? It appears, in fact, that the function of the power exerted in this instance was not that of interdiction, and that it involved four operations quite different from simple prohibition.

1. Take the ancient prohibitions of consanguine marriages (as numerous and complex as they were) or the condemnation of adultery, with its inevitable frequency of occurrence; or on the other hand, the recent controls through which, since the nineteenth century, the sexuality of children has been subordinated and their "solitary habits" interfered with. It is clear that we are not dealing with one and the same power mechanism. Not only because in the one case it is a question of law and penalty, and in the other, medicine and regimentation; but also because the tactics employed is not the same. On the surface, what appears in both cases is an effort at elimination that was always destined to fail and always constrained to begin again. But the prohibition of "incests" attempted to reach its objective through an asymptotic decrease in the thing it condemned, whereas the control

of infantile sexuality hoped to reach it through a simultaneous propagation of its own power and of the object on which it was brought to bear. It proceeded in accordance with a twofold increase extended indefinitely. Educators and doctors combatted children's onanism like an epidemic that needed to be eradicated. What this actually entailed, throughout this whole secular campaign that mobilized the adult world around the sex of children, was using these tenuous pleasures as a prop, constituting them as secrets (that is, forcing them into hiding so as to make possible their discovery), tracing them back to their source, tracking them from their origins to their effects, searching out everything that might cause them or simply enable them to exist. Wherever there was the chance they might appear, devices of surveillance were installed; traps were laid for compelling admissions; inexhaustible and corrective discourses were imposed; parents and teachers were alerted, and left with the suspicion that all children were guilty, and with the fear of being themselves at fault if their suspicions were not sufficiently strong; they were kept in readiness in the face of this recurrent danger; their conduct was prescribed and their pedagogy recodified; an entire medico-sexual regime took hold of the family milieu. The child's "vice" was not so much an enemy as a support; it may have been designated as the evil to be eliminated, but the extraordinary effort that went into the task that was bound to fail leads one to suspect that what was demanded of it was to persevere, to proliferate to the limits of the visible and the invisible, rather than to disappear for good. Always relying on this support, power advanced, multiplied its relays and its effects, while its target expanded, subdivided, and branched out, penetrating further into reality at the same pace. In appearance, we are dealing with a barrier system; but in fact, all around the child, indefinite *lines of penetration* were disposed.

2. This new persecution of the peripheral sexualities entailed an *incorporation of perversions* and a new *specification*

of individuals. As defined by the ancient civil or canonical codes, sodomy was a category of forbidden acts; their perpetrator was nothing more than the juridical subject of them. The nineteenth-century homosexual became a personage, a past, a case history, and a childhood, in addition to being a type of life, a life form, and a morphology, with an indiscreet anatomy and possibly a mysterious physiology. Nothing that went into his total composition was unaffected by his sexuality. It was everywhere present in him: at the root of all his actions because it was their insidious and indefinitely active principle; written immodestly on his face and body because it was a secret that always gave itself away. It was consubstantial with him, less as a habitual sin than as a singular nature. We must not forget that the psychological, psychiatric, medical category of homosexuality was constituted from the moment it was characterized—Westphal's famous article of 1870 on "contrary sexual sensations" can stand as its date of birth¹—less by a type of sexual relations than by a certain quality of sexual sensibility, a certain way of inverting the masculine and the feminine in oneself. Homosexuality appeared as one of the forms of sexuality when it was transposed from the practice of sodomy onto a kind of interior androgyny, a hermaphrodism of the soul. The sodomite had been a temporary aberration; the homosexual was now a species.

So too were all those minor perverts whom nineteenth-century psychiatrists entomologized by giving them strange baptismal names: there were Krafft-Ebing's zoophiles and zoerasts, Rohleder's auto-monosexualists; and later, mixoscophiles, gynecomasts, presbyophiles, sexoesthetic inverts, and dyspareunist women. These fine names for heresies referred to a nature that was overlooked by the law, but not so neglectful of itself that it did not go on producing more species, even where there was no order to fit them into. The

machinery of power that focused on this whole alien strain did not aim to suppress it, but rather to give it an analytical, visible, and permanent reality: it was implanted in bodies, slipped in beneath modes of conduct, made into a principle of classification and intelligibility, established as a *raison d'être* and a natural order of disorder. Not the exclusion of these thousand aberrant sexualities, but the specification, the regional solidification of each one of them. The strategy behind this dissemination was to strew reality with them and incorporate them into the individual.

3. More than the old taboos, this form of power demanded constant, attentive, and curious presences for its exercise; it presupposed proximities; it proceeded through examination and insistent observation; it required an exchange of discourses, through questions that extorted admissions, and confidences that went beyond the questions that were asked. It implied a physical proximity and an interplay of intense sensations. The medicalization of the sexually peculiar was both the effect and the instrument of this. Imbedded in bodies, becoming deeply characteristic of individuals, the oddities of sex relied on a technology of health and pathology. And conversely, since sexuality was a medical and medicalizable object, one had to try and detect it—as a lesion, a dysfunction, or a symptom—in the depths of the organism, or on the surface of the skin, or among all the signs of behavior. The power which thus took charge of sexuality set about contacting bodies, caressing them with its eyes, intensifying areas, electrifying surfaces, dramatizing troubled moments. It wrapped the sexual body in its embrace. There was undoubtedly an increase in effectiveness and an extension of the domain controlled; but also a sensualization of power and a gain of pleasure. This produced a twofold effect: an impetus was given to power through its very exercise; an emotion rewarded the overseeing control and carried it further; the intensity of the confession renewed the questioner's curiosity; the pleasure discovered fed back to the power that encir-

cled it. But so many pressing questions singularized the pleasures felt by the one who had to reply. They were fixed by a gaze, isolated and animated by the attention they received. Power operated as a mechanism of attraction; it drew out those peculiarities over which it kept watch. Pleasure spread to the power that harried it; power anchored the pleasure it uncovered.

The medical examination, the psychiatric investigation, the pedagogical report, and family controls may have the over-all and apparent objective of saying no to all wayward or unproductive sexualities, but the fact is that they function as mechanisms with a double impetus: pleasure and power. The pleasure that comes of exercising a power that questions, monitors, watches, spies, searches out, palpates, brings to light; and on the other hand, the pleasure that kindles at having to evade this power, flee from it, fool it, or travesty it. The power that lets itself be invaded by the pleasure it is pursuing; and opposite it, power asserting itself in the pleasure of showing off, scandalizing, or resisting. Capture and seduction, confrontation and mutual reinforcement: parents and children, adults and adolescents, educator and students, doctors and patients, the psychiatrist with his hysteric and his perverts, all have played this game continually since the nineteenth century. These attractions, these evasions, these circular incitements have traced around bodies and sexes, not boundaries not to be crossed, but *perpetual spirals of power and pleasure*.

4. Whence those *devices of sexual saturation* so characteristic of the space and the social rituals of the nineteenth century. People often say that modern society has attempted to reduce sexuality to the couple—the heterosexual and, insofar as possible, legitimate couple. There are equal grounds for saying that it has, if not created, at least outfitted and made to proliferate, groups with multiple elements and a circulating sexuality: a distribution of points of power, hierarchized and placed opposite to one another; “pursued”

pleasures, that is, both sought after and searched out; compartmental sexualities that are tolerated or encouraged; proximities that serve as surveillance procedures, and function as mechanisms of intensification; contacts that operate as inductors. This is the way things worked in the case of the family, or rather the household, with parents, children, and in some instances, servants. Was the nineteenth-century family really a monogamic and conjugal cell? Perhaps to a certain extent. But it was also a network of pleasures and powers linked together at multiple points and according to transformable relationships. The separation of grown-ups and children, the polarity established between the parents' bedroom and that of the children (it became routine in the course of the century when working-class housing construction was undertaken), the relative segregation of boys and girls, the strict instructions as to the care of nursing infants (maternal breast-feeding, hygiene), the attention focused on infantile sexuality, the supposed dangers of masturbation, the importance attached to puberty, the methods of surveillance suggested to parents, the exhortations, secrets, and fears, the presence—both valued and feared—of servants: all this made the family, even when brought down to its smallest dimensions, a complicated network, saturated with multiple, fragmentary, and mobile sexualities. To reduce them to the conjugal relationship, and then to project the latter, in the form of a forbidden desire, onto the children, cannot account for this apparatus which, in relation to these sexualities, was less a principle of inhibition than an inciting and multiplying mechanism. Educational or psychiatric institutions, with their large populations, their hierarchies, their spatial arrangements, their surveillance systems, constituted, alongside the family, another way of distributing the interplay of powers and pleasures; but they too delineated areas of extreme sexual saturation, with privileged spaces or rituals such as the classroom, the dormitory, the visit, and the consultation. The forms of a nonconjugal, nonmonogamous sexuality were drawn there and established.

Nineteenth-century "bourgeois" society—and it is doubtless still with us—was a society of blatant and fragmented perversion. And this was not by way of hypocrisy, for nothing was more manifest and more prolix, or more manifestly taken over by discourses and institutions. Not because, having tried to erect too rigid or too general a barrier against sexuality, society succeeded only in giving rise to a whole perverse outbreak and a long pathology of the sexual instinct. At issue, rather, is the type of power it brought to bear on the body and on sex. In point of fact, this power had neither the form of the law, nor the effects of the taboo. On the contrary, it acted by multiplication of singular sexualities. It did not set boundaries for sexuality; it extended the various forms of sexuality, pursuing them according to lines of indefinite penetration. It did not exclude sexuality, but included it in the body as a mode of specification of individuals. It did not seek to avoid it; it attracted its varieties by means of spirals in which pleasure and power reinforced one another. It did not set up a barrier; it provided places of maximum saturation. It produced and determined the sexual mosaic. Modern society is perverse, not in spite of its puritanism or as if from a backlash provoked by its hypocrisy; it is in actual fact, and directly, perverse.

In actual fact. The manifold sexualities—those which appear with the different ages (sexualities of the infant or the child), those which become fixated on particular tastes or practices (the sexuality of the invert, the gerontophile, the fetishist), those which, in a diffuse manner, invest relationships (the sexuality of doctor and patient, teacher and student, psychiatrist and mental patient), those which haunt spaces (the sexuality of the home, the school, the prison)—all form the correlate of exact procedures of power. We must not imagine that all these things that were formerly tolerated attracted notice and received a pejorative designation when the time came to give a regulative role to the one type of sexuality that was capable of reproducing labor power and the form of the family. These polymorphous conducts were

actually extracted from people's bodies and from their pleasures; or rather, they were solidified in them; they were drawn out, revealed, isolated, intensified, incorporated, by multifarious power devices. The growth of perversions is not a moralizing theme that obsessed the scrupulous minds of the Victorians. It is the real product of the encroachment of a type of power on bodies and their pleasures. It is possible that the West has not been capable of inventing any new pleasures, and it has doubtless not discovered any original vices. But it has defined new rules for the game of powers and pleasures. The frozen countenance of the perversions is a fixture of this game.

Directly. This implantation of multiple perversions is not a mockery of sexuality taking revenge on a power that has thrust on it an excessively repressive law. Neither are we dealing with paradoxical forms of pleasure that turn back on power and invest it in the form of a "pleasure to be endured." The implantation of perversions is an instrument-effect: it is through the isolation, intensification, and consolidation of peripheral sexualities that the relations of power to sex and pleasure branched out and multiplied, measured the body, and penetrated modes of conduct. And accompanying this encroachment of powers, scattered sexualities rigidified, became stuck to an age, a place, a type of practice. A proliferation of sexualities through the extension of power; an optimization of the power to which each of these local sexualities gave a surface of intervention: this concatenation, particularly since the nineteenth century, has been ensured and relayed by the countless economic interests which, with the help of medicine, psychiatry, prostitution, and pornography, have tapped into both this analytical multiplication of pleasure and this optimization of the power that controls it. Pleasure and power do not cancel or turn back against one another; they seek out, overlap, and reinforce one another. They are linked together by complex mechanisms and devices of excitation and incitement.

We must therefore abandon the hypothesis that modern industrial societies ushered in an age of increased sexual repression. We have not only witnessed a visible explosion of unorthodox sexualities; but—and this is the important point—a deployment quite different from the law, even if it is locally dependent on procedures of prohibition, has ensured, through a network of interconnecting mechanisms, the proliferation of specific pleasures and the multiplication of disparate sexualities. It is said that no society has been more prudish; never have the agencies of power taken such care to feign ignorance of the thing they prohibited, as if they were determined to have nothing to do with it. But it is the opposite that has become apparent, at least after a general review of the facts: never have there existed more centers of power; never more attention manifested and verbalized; never more circular contacts and linkages; never more sites where the intensity of pleasures and the persistency of power catch hold, only to spread elsewhere.
